

Businesses need to analyze data in real time, gain specific insights about their customers so they are able to deliver a customized experience. In this data age, data can come from a multitude of sources, and in the future will only increase in volume, number, and diversity with the addition of IoT devices. CIOs need to equip themselves with tools to analyze all the relevant data so they are able predict customer needs

IDC predicts that the data will continue to grow at a CAGR of 41% through 2020. Yet data is only as valuable as the insights that can be drawn out of it. Organizations need to invest the right tools to address current and future challenges. HyperCloud is an enterprise-grade, appliance based solution that provides the scale and performance necessary for mission-critical workloads like Microsoft SQL.

HyperCloud™ brings the public cloud benefits into your own datacenter, simplicity, elasticity, and end to end automation (provisioning, administration and scaling) of your SQL Server infrastructure. Microsoft® SQL Server® 2016 with HyperCloud comes with an all-flash architecture and is a feature-rich solution for both OLTP and OLAP workloads; memory optimized tables allow faster OLTP workloads via parallelized operations, queries with analytic workloads are a hundred times faster with Microsoft SQL 2016 on HyperCloud.

Figure 1: Microsoft® SQL Server® 2016 on HyperCloud™

KEY BENEFITS

Utility Pricing: The only Microsoft SQL solution that comes with a pay as you go model

Simplify IT: Hides underlying complexity with automated provisioning of Microsoft SQL 2016

Cloud Ready: Consistent experience from private to public cloud and hybrid cloud capable

Faster time to value: SQL on HyperCloud is delivered as a complete solution, so IT can solely focus on service delivery

The HyperCloud Advantage

Microsoft SQL made simple

HyperCloud takes about 5 minutes to setup. With a few clicks build an entire clustered SQL environment with HyperCloud Management

Consumption economics

HyperCloud is the industry's only enterprise cloud service, that allows you to pay as you go model. It is a AWS like environment in your datacenter with the benefits of security and control, and governance.

Governance and approval workflows

Built in management and governance that allows IT to setup approval workflows, policies and/or self service provisioning of SQL 2016.

Future proof your solution

Scale instantly, add nodes and/or to the HyperCloud to expand capacity on-the-fly. Add SQL instances to your cluster using HyperCloud Management as your needs grow.

Microsoft SQL on HyperCloud

HyperGrid HyperCloud provides a full stack, enterprise cloud service platform with consumption economics. Our solution eliminates the traditional do-it-yourself approach that has plagued traditional on-prem environments. SQL 2016 on HyperCloud offers an entire stack of features and capabilities across the different layers.

Figure 2: Overview of Microsoft SQL as-a-Service on HyperCloud

Infrastructure Services

High-performance, scale-out infrastructure with fully integrated, programmable network fabric and flash-optimized software defined storage.

Management Services

Consumer grade and mobile ready, HTML-5 based management console that automates the end-to-end lifecycle of compute, network and storage via an intuitive and easy to use experience.

Microsoft SQL on HyperCloud

Automation

HyperCloud completely automates the provisioning and administration of a highly-available Microsoft SQL 2016 environment saving hours on operational challenges around deployment.

Governance

IT Ops can further create policies and build approval workflows around SQL on HyperCloud's application management platform to build governance and control into their organization, eliminating shadow IT.

Summary

Define an IT strategy that benefits your organization without compromising on your priorities. Start a free trial of HyperCloud today. Get a complete solution delivered to you and pay for only what you use.
