

HyperGrid™ is the market leader in Enterprise Cloud-as-a-Service and delivers IT as a utility to enterprises. HyperGrid HyperCloud™ is the only enterprise cloud platform that is delivered as a service within the customer datacenter with pay-as-you-go economics. HyperCloud is easy to consume, highly reliable, elastic and secure. Customers just pay a monthly bill for the resources used without any need for upfront commitments. HyperCloud delivers a fully-integrated stack that includes management, software-defined services, and infrastructure for compute, storage and networking. Further, HyperCloud is fully managed with 24x7 monitoring that dramatically reduces customer effort for management and operational up keep. Consequently, IT is elevated to focus on rapid services delivery for the business instead of spending endless cycles on repetitive, non-business centric activities just to keep lights on.

HyperCloud Enterprise Cloud-as-a-Service

HyperCloud is a fully integrated, turnkey cloud service that customers are able to deploy within minutes in the datacenter. HyperCloud eliminates the need for IT to buy, integrate, test, validate, fine tune and continuously update various pieces of software and hardware required to deliver IT services. Instead, HyperCloud delivers a full stack solution that combines simple application management, powerful security, governance and control functionality, and software-defined services that are built on industry-leading infrastructure fabric for compute, all-flash storage, and integrated networking. HyperCloud provides multi-hypervisor support that integrates easily into existing environment and delivers seamless scalability and high performance for any application whether on bare-metal, virtual machines or containers. Customers can go from zero to production within minutes!

HyperCloud also provides hybrid cloud management for all major public and private clouds. This gives customers choice and flexibility to deploy applications in any environment and helps IT seamlessly deliver a scalable, repeatable and consistent service delivery framework across HyperCloud and all other clouds.

Benefits

Integrated stack, Pay-As-You-Go

No need to build a cloud or spend upfront; reduce overall IT costs by over 50%

Hybrid cloud management

Single pane of glass to govern, control costs and manage applications in all clouds

Simple management

Self-service provisioning increases deployment efficient by 70%

Fully-managed

Elevate IT focus from infrastructure management to agile services delivery

The HyperCloud Advantage

Cloud computing within minutes. HyperCloud delivers fully functional and IT optimized cloud services on-premises that requires no heavy lifting for deployment or use. Go from zero to production within minutes

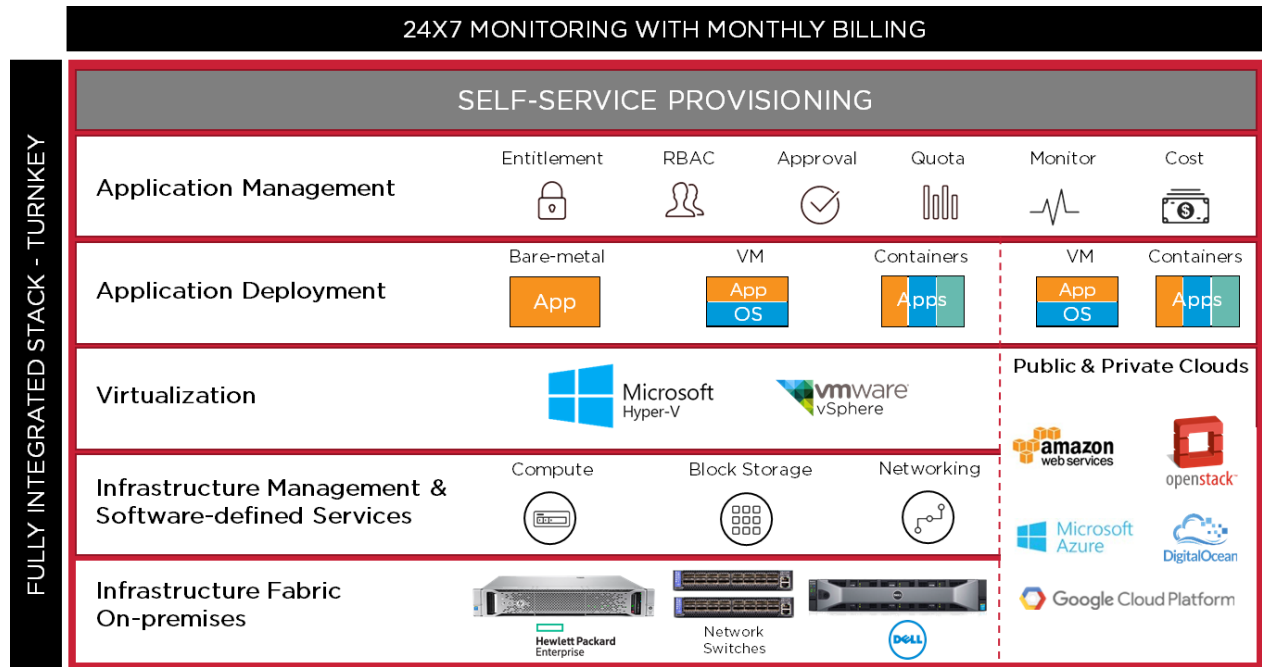

Get HyperCloud with no risk. Start with as low as a 6-month contract! There is no upfront spending and monthly billing is based on actual VM usage. Start small and grow

Simple management. HyperCloud delivers self-service provisioning for users powered by simple management of resources, familiar workflows and easy integration with existing processes. There is no steep learning curve.

Lowest per VM cost¹. HyperCloud eliminates CapEx completely and dramatically reduces OpEx. Get the lowest cost per VM of all clouds

¹ All costs are monthly. HyperCloud pricing includes management, software-defined services, infrastructure fabric (compute, networking, SSD storage) and support. AWS used as a reference for public cloud cost comparison

HyperCloud Overview

Customer Scenarios

Infrastructure-as-a-Service (IaaS) – Increase agility through self-service provisioning and deliver on-demand resources with elastic and high-performance infrastructure services. Reduce overall IT costs by 50% with PAYG.

VDI with IaaS - Delivers insanely simple VDI that eliminates massive complexity of VDI management, provides high performance and reduces cost by up to 70%. Delivers a single per user per month bill – it's that simple

SQL with IaaS – Consolidates cores and eliminates SQL sprawl by delivering high performance, low latency and massive scalability for SQL applications. Reduces costs by as much as 70%

Cloud Management with IaaS – Single pane of management for VMs and containers on HyperCloud and all major public clouds. Increase deployment efficiency by as much as 2.5x while eliminating sprawl and resource wastage

Containers Service with IaaS – Seamlessly integrate DevOps (resource management) and IT (policies) workflows for containerized applications on HyperCloud and all major public clouds. Combine agility with governance

Getting Started

Start today with as little as a 6-month contract on-premises or a free one-month trial of hosted HyperCloud! To learn more about what HyperCloud can do for you, write to us at info@hypergrid.com.
