

WHAT CAN HYPERCLOUD DO FOR YOU?

Leverage infrastructure refreshes and accelerate deployments

Refresh aging hardware to HyperCloud, a fully integrated stack with automation capabilities, so IT is not wasting time on extended deployments

Identify the best cloud for your applications

With your requirements, HyperCloud will evaluate all cloud options available to you and select the best option with a data-driven decision

Support compliance and governance initiatives

Gain all the benefits of public cloud with governance capabilities built in to ensure usage policies are enforced

Optimize IT costs

Consumption-based pricing delivers 40% more value for your money

Public Cloud, On-Prem

Leverage the benefits of on-demand resources to meet changing business needs within your data center

Easy Datacenter Consolidation

A robust cloud portal simplifies the migration of applications and data to an on-prem cloud infrastructure for fast consolidation

Accelerate project timelines

IT is prepared for the unexpected with deployment times reduced by 60%

Eliminate Management and Maintenance

HyperGrid manages the entire HyperCloud infrastructure so that IT can focus on productive activities to move the business forward

Remove barriers to innovation

Ensure activities are always able to move forward with access to infrastructure, applications and other resources available as needed

Ensure simple, consistent application deployment

With over 400 templates available from the Enterprise App Store, IT can quickly and consistently spin up VMs and containers, including multi-tiered applications
